PROGRAMME SUMMARY

*Background*

The health and social care landscape is undergoing significant and rapid change, both in the UK and internationally. Advances in health technologies, rising costs of care, increasing consumer demand, ageing populations, public health challenges such as obesity, the increasing prevalence of long-term conditions (such as diabetes and dementia) and other pressures present significant and growing challenges. As a result, health and social care services are often fragmented, hard to access and failing to keep pace with people’s changing health and social care needs, and it is increasingly clear that minor or incremental changes to existing models of care are not sufficient to address these challenges.

A key set of ideas and approaches to tackling these issues involves integrated and person-centred (or personalised) care. Integrated care aims to improve quality and efficiency by providing joined-up, coordinated health and social care. It also typically involves integration or close working with other sectors, such as housing, education and the criminal justice system. At the heart of integrated care is person-centred care, the principle that professionals and organisations who work with people with health, social care and other needs should collaborate to provide high quality care and treatment. Care should be planned and organised around the needs, preferences and priorities of individuals, carers and families, so that “people have choice and control over the way their care is planned and delivered. It should include service users and carers as equal partners, and puts into practice the principle of ‘no decision about me without me’.

The benefits of care that is personalised and coordinated across different healthcare settings, across mental and physical health, and across health and social care have been well documented. It has been shown to improve health and other outcomes for service users, and to reduce fragmentation and inefficiencies in service delivery. It is also seen as a key mechanism for addressing staff shortages and the growing demand for health and social care services.

The development of integrated and person-centred care is therefore now seen as a top priority among policymakers in many countries (WHO, 2016). In England, following the
publication of the *NHS Long Term Plan* (2019), integrated and person-centred care have moved centre stage. Key themes include shared decision making and giving people more control over their own health and care; more effective collaboration between primary care, community services, local councils and other partners; and ensuring people can access services such as transport, leisure, education and housing. Specific areas for development include social prescribing, personalised care planning, personal health budgets, personal care records, and single points of access and assessment.

Such an ambitious and wide-ranging policy agenda clearly has significant implications for leaders of health and social care organisations (including public health), and for those professionals directly involved in delivering care. There are many excellent examples of effective integrated health and social care services delivering significant improvements in care. However, it is clear that progress has been slow and uneven, and that much work is still needed in order to embed the culture and practice of integrated and person-centred care across the whole of the health and social care system. Creating and sustaining genuine change requires organisations and professionals to work differently, and to adopt a systematic approach to engaging patients in decisions about their health and wellbeing. However, organisations vary widely in their preparedness for change, and in the skills, resources and leadership capacity available to them.

This programme is aimed at professionals from any background – both clinical (e.g. medical, nursing and allied health professionals) and non-clinical (e.g. commissioners, managers and policymakers) - working within health or social care organisations who wish to develop their knowledge, understanding and skills relating to integrated and person-centred care. It is designed to meet the professional needs of those who are either already occupying leadership or management roles, or who wish to move into such roles, and who are interested in leading integrated care initiatives for the benefit of their local populations, service users and carers, and organisations.

By completing the MSc Leading Integrated Care you will have demonstrated original application of theory and evidence to current problems and issues within integrated care from different perspectives to broaden your expertise and skills. You will have acquired applied research and evaluation skills to critically investigate integrated care issues and have engaged in research that contributes new views to this area.

If you exit the programme with a Postgraduate Diploma in Leading Integrated Care will have critically explored theory and evidence relating to current problems and issues within integrated care. You will have acquired the applied research and evaluation skills required to critically evaluate current evidence in the field and provided appropriate critiques of knowledge and techniques in relation to this.

If you exit the programme with a Postgraduate Certificate in Leading Integrated Care will have been enabled to critically examine theory and evidence relating to current problems and issues within integrated care and be able to synthesise and apply these. You will also be able to use a range of techniques to undertake your scholarly work.

*Main aims of the programme*

This innovative programme aims to help tackle these challenges. Specifically, the programme aims to:

- respond to and keep abreast of the rapid evolution in the policy, theory and practice of integrated and person-centred care, both in the UK and internationally;
• combine academic rigour with the development of practical, transferable skills which can be applied in a wide variety of health and social care settings;
• introduce you to the key concepts and models of integration and personalisation as applied to health and social care, and the values, principles, evidence and theories that underpin them;
• emphasise the need for strategic initiatives through partnerships between health, social care and other public, private and voluntary sector organisations, and for securing broad local support for change;
• provide a forum for sharing knowledge and experience with other participants through discussion and debate;
• develop critically reflective leaders, practitioners or researchers who will contribute to leading and transforming health and social care;
• develop your theoretical and practical understanding of how integrated services are planned, implemented, evaluated and commissioned, using real-world examples and case studies to illustrate areas of success in integration and personalisation.

Programme structure

The programme is structured around the main stages or ‘building blocks’ required for the successful development and implementation of any integrated or person-centred care initiative (Miller, 2016):

• Establishing purpose and need
• Engaging individuals and communities
• Leading self and others
• Managing change
• Reviewing and evaluating
• Working with service users and carers
• Working with staff
• Working with processes (e.g. information technology)
• Sustaining and improving

Each core module will address one or more of these building blocks:

• Integrated and Person-Centred Health and Social Care (30 credits): the theory, practice and evidence base of integrated and person-centred care; areas covered will include the main models of and approaches to integrated and person-centred care, needs assessment, working with service users, carers and staff, and the role of technology.

• Systems Leadership (30 Credits): how to lead across boundaries (departmental, organisational or sector) and influence others; how to work when you face complex and seemingly intractable problems, and where you need to balance multiple uncertainties and challenges.

• Evidence-Based Evaluation (30 credits): how to successfully lead and manage an evaluation of an integrated care initiative, from initial planning and design through to implementation; the module will include a thorough grounding in
relevant qualitative and quantitative research methods, and evidence appraisal and synthesis skills.

The links between theory, evidence and practical application are emphasised at all stages of the programme.

You will also choose two further 15-credit (or one 30-credit) elective (optional) modules from the wide range offered by the School of Health Sciences. These may relate to topics such as health policy, public health, health economics or health and social care commissioning.

**Dissertation**

Drawing on your learning from the taught component of the programme, you will write a Dissertation in the form of an *integrated care project report* of between 12,000 and 15,000 words, focused on the design and planning of a specific integrated/person-centred care initiative (60 credits).

**Student support**

You will be supported and advised in a number of ways, including academic and pastoral support from the programme team.

Academic support will be provided throughout your time on the programme. The Academic Learning Support team organises regular workshops on a range of topics to help you learn more effectively ([http://www.city.ac.uk/current-students/academic/study-skills-support](http://www.city.ac.uk/current-students/academic/study-skills-support)). These include study skills (such as reading strategies and essay planning), writing skills and time management. One-to-one and group tutorials are also available on request. Extensive online learning resources are also provided via Moodle, the University’s *Virtual Learning Environment* ([https://moodle.city.ac.uk/](https://moodle.city.ac.uk/)).

Additional support services are provided by the Learning Success, Dyslexia Support and Disability Support teams, who can provide advice and assistance, and offer one-to-one consultations ([https://www.city.ac.uk/study/student-support/learning-support](https://www.city.ac.uk/study/student-support/learning-support)).

You will also be allocated a personal tutor at the beginning of your programme who will be responsible for overseeing your pastoral wellbeing and will also be able to advise you on a range of academic issues.

As a student at City you will also be part of a vibrant health and social care community that encompasses current and former students from a wide range of backgrounds, academics from various disciplines, practitioners and users of services.

To find out more about the extensive range of student support services available at City, see [http://www.city.ac.uk/current-students](http://www.city.ac.uk/current-students).

**Registration period**

The normal period of registration for this programme is one year (for full-time students) or two years (for part-time students) for the taught component.

The maximum period of registration for this programme is 3 years (full-time) or 5 years (part-time).
WHAT WILL I BE EXPECTED TO ACHIEVE?

On successful completion of this programme, you will be expected to be able to:

Knowledge and understanding:
- Critically discuss the key contextual factors and policy drivers relating to the integration and personalisation agenda within health and social care (UK and international), and the challenges in enacting it
- Demonstrate originality in applying systematic knowledge of key concepts, theoretical frameworks, types and models of integration and personalisation that are at the forefront of current thinking within health and social care
- Critically evaluate and apply the main principles of needs assessment and of the engagement and involvement of service users, carers, staff, external partners and the public
- Demonstrate a broad understanding of the theory and practice of leading across boundaries, influencing others, managing complex change and dealing with uncertainty
- Critically apply appropriate principles and methods of evidence-based evaluation, monitoring and review of integrated care initiatives, from initial planning and design through to implementation.

Skills:
- Demonstrate the development applied skills in joint health and social care needs assessment, systems leadership and the management of complex change
- Evidence the acquisition of key qualitative and quantitative research and evaluation skills, and the ability to identify, critically appraise and synthesise literature and data relating to integrated health and social care from a range of sources
- Demonstrate effective presentation, communication, team working and influencing skills (oral and written) through participation in workshops, seminars and group activities
- Function as a critically reflective and self-evaluative learner, practitioner and leader
- Demonstrate the ability to develop and lead a successful integrated care initiative, from initial conception and design through to implementation, evaluation and review
- Actively contribute to building the evidence base for integrated health and social care, and disseminate the results of research effectively to diverse audiences.

Values and attitudes:
- Exemplify the values of person-centred care for service users, carers and families, and of working in partnership with them to identify and meet their needs and preferences
- Show respect and tolerance for other course participants, and be sensitive to and respect the diversity of individuals and communities
- Correctly reference the work of others and adhere to University regulations regarding plagiarism and academic misconduct
- Respect privacy and confidentiality (especially within the research context)
- Support the principle of reflective, self-directed, life-long personal development and learning.

**HOW WILL I LEARN?**

The programme adopts a project-based and leadership-focused approach throughout. From the beginning you will be supported in identifying a specific area of need or development within your service or organisation, and in planning an integrated care initiative in order to address this need. You will be introduced to the key stages of developing and leading an integrated care initiative, from initial needs assessment and design of the initiative, through to its development, implementation and evaluation. You will explore approaches to user and carer involvement and co-production, staff engagement, systems leadership and change management. The opportunities provided by information technology and technology-enabled care for improving integration and personalisation will also be explored.

Your learning will be facilitated through innovative teaching methods to promote active learning. Teaching and learning will involve a substantial group work component, providing opportunities for networking and sharing of perspectives.

Programme lecturers will be academic staff from the School of Health Sciences and there will be a range of external visiting lecturers and guest speakers, including experts from the School’s extensive network of practice partners (NHS and social care organisations) across London. These include policy experts, senior managers and leaders and frontline practitioners from many disciplines.

The School’s academic staff are drawn from a wide range of professional and practice backgrounds, including nursing, midwifery, health visiting and speech and language therapy. In their professional roles they are frequently required to work across different health, social care and educational settings (for example, within multidisciplinary teams), and across community, primary and secondary care. They have extensive practical experience of integrated and person-centred care, and of the challenges involved in delivering it. The School also frequently involves service users and carers in its educational and research activities.

The programme will place a strong emphasis on experiential learning, reflection and links with the NHS and social care. Part of each module’s guided and self-directed study component will be dedicated to applying the module’s content to your professional roles and development requirements, and to reflecting on your learning and its application to your own needs and to those of your employer and the wider health and social care system.

The programme uses a blended approach, encompassing both face-to-face and online learning and teaching strategies. It makes full use of available learning technologies whilst recognising the value of face-to-face interaction and facilitation. The variety of methods used will develop your strengths and preferred learning styles, but will also help you to acquire further educational strategies to meet the required outcomes of the programme.

A typical 15-credit module involves a total of around 25 hours of contact time (i.e. lecturers, seminars and group activities). In addition, you will be expected to undertake
125 independent study hours for the module (for 30-credit modules, the hours will be double). Some of these hours will include use of online learning tools, such as Moodle. The final integrated care project (Dissertation) involves 600 hours of study, comprising around 3 hours of lectures/workshops, 12 hours of one-to-one supervision meetings and 585 hours of self-directed study.

A range of methods will be used throughout the programme, including:

- **Lectures**: a lecture enables information to be presented in a logical manner to groups of students. This is a useful method for presenting an overview of new material and in stimulating you to read further around the subject area. Lectures may be in ‘real time’ or recorded.

- **Seminars**: these small group sessions are essential supplements to the lectures and give you the opportunity to apply the material covered in the lectures and your independent reading to real-world case studies and examples of integrated care. The seminars will extend the depth and breadth of your knowledge and are designed to be motivating, enhance your presentation, communication and team working skills and develop your powers of reasoning.

- **Guided independent study**: during the programme you will have periods of time that are set aside for you to undertake prescribed activities individually or in study groups. These activities may form part of the formative assessment strategy to help you to complete the summative assessment or may be set tasks which you should complete prior to attendance at a taught session.

- **Student-directed learning**: a proportion of study time for each module will be self-directed and during these times you should explore areas of interest, read widely and prepare for assessments. Whilst this time counts towards the total hours allocated to the programme, it will be up to you to decide exactly how you spend this time and which areas of learning you wish to pursue.

- **Online learning (or e-learning)**: all teaching and learning activities are facilitated and enhanced by Moodle, City's web-based Virtual Learning Environment. All programme materials, including lecture slides, reading lists and other learning resources, will be made available on Moodle. Extensive use will also be made of Moodle's communication and discussion features to facilitate information sharing and interaction between academic staff and students.

You will also have full access to City’s other support services, including the Library Information Service, Computing Service, the Open Learning Centre, and other sources of personal support.

---

**WHAT TYPES OF ASSESSMENT AND FEEDBACK CAN I EXPECT?**

**Assessment and Assessment Criteria**

The programme’s assessment strategy has been designed to allow module assignments to be tailored to your specific learning and professional development needs.

There will be a variety of assessment methods to evaluate your knowledge and skills in all aspects of the programme.
Written assignments (including essays) enable you to explore and critically analyse key concepts and theories, and to apply these to real-world examples of integrated and person-centred care. You will be expected to develop a coherent line of argument, critically appraise the evidence base and critically reflect upon your own beliefs and assumptions. Written assignments may take the form of case studies in which you will have the opportunity to relate your assignment to a particular service or issue within integrated care.

There will additionally be collaborative group assessments which will evaluate your analysis, presentation, team working and influencing skills.

For the final integrated care project (Dissertation) you will undertake a substantial piece of original work focussed on the design and planning of an integrated/person-centred care initiative.

Comprehensive information and guidance on what is required to complete each module assessment will be provided in class and made available on Moodle, and academic staff will be available to provide formative feedback and advice on written assessments prior to submission. All dates for submission of assessments will be notified in advance of the start of each module.

What do I have to do to pass?

Assessment Criteria are descriptions, based on the intended learning outcomes, of the skills, knowledge or attributes you need to demonstrate in order to complete an assessment successfully, providing a mechanism by which the quality of an assessment can be measured.

Grade-Related Criteria are descriptions of the level of skills, knowledge or attributes you need to demonstrate in order achieve a certain grade or mark in an assessment, providing a mechanism by which the quality of an assessment can be measured and placed within the overall set of marks. Assessment Criteria and Grade-Related Criteria will be made available to you to support you in completing assessments. These may be provided in programme handbooks, module specifications, on Moodle or attached to a specific assessment task.

Feedback on assessment

Lecturers and/or module leaders will be available to provide formative (written or verbal) feedback and advice on all module assessments prior to submission.

Following each assessment, marks and feedback will be provided on Moodle in line with the Assessment Regulations and Policy, normally within 3 weeks (for interim module assessments) or 4 weeks (for final assessments) of the submission deadline. The timescale for feedback on final year projects or dissertations may be longer.

Feedback is structured and provided in such a way as to help you to further develop your knowledge and skills as well as understand areas for development. Markers will be available to answer queries about the marks and feedback if these are not clear.

A selection of all assessments will be internally moderated and sent to the external examiner. All initial marks will be therefore provisional, pending external examiner approval and ratification by the Assessment Board. The full Assessment and Feedback
Assessment Regulations

In order to pass your Programme, you should complete successfully or be exempted from the relevant modules and assessments and will therefore acquire the required number of credits.

The pass mark for each module is 50%. In order to pass a module you must pass each component at 50%. The weighting of a module’s different components may be found in the Module Specification for that module.

If you fail an assessment component or a module, you will be offered one resit attempt. However, if you did not participate in the first assessment and have no extenuating circumstances, you may not be offered a resit.

If you are successful in the resit, you will be awarded the credit for that module. The mark for each assessment component that is subject to a resit will be capped at the pass mark for the module. This capped mark will be used in the calculation of the final module mark together with the original marks for the components that you passed at first attempt.

If you do not meet the requirements for a module and do not complete your resit by the date specified you will not progress and the Assessment Board will require that you be withdrawn from the Programme.

If you fail to meet the requirements for the Programme, the Assessment Board will consider whether you are eligible for an Exit Award as per the table below.

If you would like to know more about the way in which assessment works at City, please see the full version of the Assessment Regulations at https://www.city.ac.uk/about/education/quality-manual/6-assessment. You should also refer to the School Assessment Guidelines which you will find in your programme handbook and on Moodle.

**WHAT AWARD CAN I GET?**

**Master's Degree:**

To qualify for the award of *MSc Leading Integrated Care* you will be required to complete all the taught modules (totalling 120 credits), plus the 60-credit Dissertation module.

Postgraduate Certificate:

To exit with a *Postgraduate Certificate in Leading Integrated Care* you will be required to successfully complete the following modules (totalling 60 credits): Integrated and Person-Centred Health and Social Care, and Systems Leadership.

To exit with a *Postgraduate Certificate in Health Sciences* you will be required to achieve 60 credits by successfully completing any combination of modules from the range of core and elective modules.

Your Programme Director will advise you in your choice of modules.

**WHAT WILL I STUDY?**

**Taught component:**

You will take *four or five* taught modules, up to the value of 120 credits:

- The three *core* (compulsory) modules listed below (90 credits)
- Plus one or two *elective* (optional) modules chosen from those offered by the School of Health Sciences (30 credits). The postgraduate level modules currently offered by the School (subject to change) can be found at [https://www.city.ac.uk/study/courses/postgraduate](https://www.city.ac.uk/study/courses/postgraduate). You will be notified of the elective modules available to you at the beginning of the academic year.

You may begin planning your project at any time during the programme, however you are only able to submit your report for marking once you have successfully completed all of the taught modules.

Information on individual modules can be found in the module specifications which you will find on Moodle ([http://moodle.city.ac.uk/](http://moodle.city.ac.uk/)).

---

**WHAT KIND OF CAREER MIGHT I GO ON TO?**

Because integrated and person-centred care are increasingly high priorities for policymakers and organisations which commission or provide health and social care services, the knowledge, understanding and transferrable skills in developing, leading and evaluating integrated care initiatives that you will acquire on the programme are likely to be in increasing demand across the health and social care sector (public, private and voluntary).

**Career planning at City**

Developing your skills and enhancing your employability while at university is becoming increasingly important in today’s job market. The programme places a high value on career planning, and your career development is emphasised throughout the programme. As a City, University of London student you will enjoy full access to the University’s Careers, Student Development & Outreach service, which provides a professional, high quality careers and information service for students and graduates of City, University of London. The service works closely with local, national and international employers, and with other University departments. Their aim is to support and develop you by providing the tools you need to enhance your employability.

The service offers qualified advisors who can work with you to provide tailored, individual support and careers advice during your time at City, and after you graduate. It includes one-to-one coaching, CV advice and interview preparation to help you maximise your future opportunities. It also organises career, development and outreach activities, including skills sessions, employer events, community volunteering, widening participation, professional mentoring, and a Buddy Scheme.

For more information on the careers support available at City, please visit [https://www.city.ac.uk/careers](https://www.city.ac.uk/careers).
WHAT STUDY ABROAD OPTIONS ARE AVAILABLE?

The University's Exchange and Study Abroad programmes are a way for you to broaden your education at an overseas university as part of your degree. For example, the School of Health Sciences has Erasmus Exchange Programme agreements with a number of universities within the EU, and you will be able to study abroad for a term should you wish to.

For more information visit https://www.city.ac.uk/study/international/exchange-and-study-abroad.

WHAT PLACEMENT OPPORTUNITIES ARE AVAILABLE?

You will have the opportunity to apply to undertake professional work experience…

[Here we may add something on the PG internship scheme, currently planned within SHS]

HOW DO I ENTER THE PROGRAMME?

Academic entry requirements

The entry requirements for this programme are:

- A first degree (2:2 class or above) or international equivalent from an approved institution of higher education.
- Extensive experience of working in the health or social care sectors may be considered as equivalent to a good honours degree for suitable applicants.

English language requirements

If your first language is not English, one of the following qualifications is also required:

- A first degree from a UK university
- A first degree from an overseas institution recognised by City as providing adequate evidence of proficiency in the English language, for example, from institutions in Australia, Canada or the USA
- International English Language Testing Service (IELTS): a score of 7.0 is required, with no subtest scoring below 6.5
- Pearson Test of English (Academic): a score of 72 required.
Recognition of Prior Learning and Experience

The MSc Leading Integrated Care follows City’s guidelines on the Recognition of Prior Certificated Learning (RPCL) and the Recognition of Prior Experiential Learning (RPEL). RPCL/RPEL may be recognised for up to a maximum of 45 academic credits.

For RPCL, if you can demonstrate that you have completed modules (at either City or another institution) that are directly equivalent to the modules for which RPCL is claimed in terms of both curriculum content and academic standing, and these modules are still current (completed within five years of enrolment), then RPCL may be recognised on a direct equivalent basis.

For RPEL, credit may be awarded, at the discretion of the Programme Director, for learning derived from relevant professional and life experience which has not previously been assessed and/or awarded credit.

Financial support

There are a variety of funding options available, including loans, bursaries and scholarships. Further details can be found on the University’s website at https://www.city.ac.uk/study/fees-and-funding.
