The device is turned on and off by a switch. The LED brightness can be adjusted based on the lighting needs of the plant. The LEDs will only turn on if there is not enough light.

The roof can be raised in order to allow for ease of removal of the pots.

The humidity sensor measures the humidity level of the soil.

Blue lights indicate that the soil humidity is at an optimum level.

A red blinking light prompts the user to water the plant.

The two inside pots are easy to remove and clean.

PlantIN is a simple, yet flexible intelligent gardening product. The equipment allows the user to grow a wide range of plants indoors - it can be stored on the floor, on the kitchen counter or mounted on the wall.
