

PROGRAMME SPECIFICATION

KEY FACTS

Programme name	Mathematics with Data Science (with Integrated Foundation Year) Mathematics with Data Science with Placement Year (with Integrated Foundation Year)
Award	BSc (Hons) BSc (Hons) with Placement Year
Exit Awards	BSc (Ordinary), Diploma of HE, Certificate of HE
School	School of Science & Technology
Department or equivalent	Mathematics
UCAS Code	G12F
Programme code	USMADI and USBMPI (with Placement Year)
Type of study	Full time
Total UK credits	490
Total ECTS	245

PROGRAMME SUMMARY

The principal aim of this programme is to introduce you to a variety of different aspects of modern Mathematics and Data Science. In Mathematics, you will cover a broad spectrum of Mathematics, with the focus of the later part of the degree being on Pure Mathematics with real applications. In Data Science you will cover practical and theoretical aspects of techniques and approaches for extracting insights from large collections of data. You will receive training in advanced mathematical and Data Science techniques and develop problem solving and communication skills much valued by employers.

The programme is organized in four years (also called programme stages) or five years with an industrial placement year. The placement takes place between years 2 and 3.

Year 0 of the degree, also known as the foundation year, provides a foundation in mathematics, economics and IT with an additional course on employability. This is intended to bring you up to the same standard as students joining the main degree directly into the first year.

Years 1 and 2 of the programme are common with years 1 and 2 of the MSci in Mathematics, and are designed to build your fundamental mathematical expertise.

Year 1 of the programme is devoted to core material, including basic programming and statistics that is needed by all Mathematics graduates. On completing this year, you will be

able to discuss underlying concepts and principles of Mathematics, Programming and Statistics and to apply these to specific problems.

In year 2 the course is still mainly core modules to prepare you for your later studies, but there are also electives for you to choose from. On completing year 2, you will be able to build on your previous knowledge and experience from Programme Stage one. You will master more advanced mathematical techniques and will be able to apply these to real life problem-solving.

In year 3 you will focus significantly on Data Science taking core modules together with electives in Data Science and Mathematics, with the Data Science modules introducing you to Artificial Intelligence and different aspects of Machine Learning. A distinctive feature of the programme is the final year group project, which provides you with the opportunity to write a technical report and give individual presentations.

The programme is undertaken full time.

Aims

1. To develop in you a comprehensive knowledge of Mathematics, with a significant level of knowledge of Data Science.
2. To develop in you the ability to communicate your knowledge and understanding effectively.
3. To prepare you to enter postgraduate studies at the masters level in Mathematics, Data Science and other closely related subjects.
4. To provide you with the basic knowledge and skills to analyse and solve mathematically based problems.
5. To enable you to cast and solve real-world problems in a mathematical or Data Science framework.
6. To enable you to appreciate the universal nature of Mathematics, a subject with no international boundaries.

WHAT WILL I BE EXPECTED TO ACHIEVE?

On successful completion of this programme, you will be expected to be able to:

Knowledge and understanding:

- demonstrate a detailed knowledge of the major ideas of pure mathematics.
- demonstrate a comprehensive knowledge of mathematical methods and be able to apply these to a range of associated problems.
- demonstrate a detailed knowledge of the major topics from a selection of numerical mathematics, applied and applicable mathematics, computational mathematics, statistics and probability.

- understand and appropriately apply the principles of Data Science.
- combine knowledge from various areas and handle complex ideas.

Skills:

- communicate in symbolic and written form and using oral presentations.
- apply core concepts and principles in well-defined contexts, showing judgement in the selection and application of tools and techniques.
- use your knowledge of computing to construct programmes in order to solve mathematical and non-mathematical problems.
- comprehend problems, formulating them mathematically and obtaining solutions by appropriate methods.
- acquire an ability to apply Mathematics and computational techniques to real world problems.
- understand logical arguments, identifying the assumptions and conclusions made.
- show confidence in calculating and manipulating Mathematics within the context of the core modules in Mathematics, Statistics and Data Science.
- apply mathematical methods to a variety of problems.
- extract insights from data using appropriate analytical methods and algorithms.
- design, develop and adapt Data Science computer programs and systems.

Values and attitudes:

- demonstrate the value of logical thought with respect to mathematical problems.
- follow, with rigour, an analytical approach towards problems.
- Work effectively and professionally in a team.

This programme has been developed in accordance with the QAA Subject Benchmark for Mathematics, Statistics and Operational Research.

HOW WILL I LEARN?

Teaching and Learning methods are designed to foster your knowledge of and enthusiasm for the subject and stimulate engagement and participation in the learning process. They encourage learning in depth and encourage you to reflect on and take responsibility for your own learning and to develop your academic self-confidence.

The majority of courses are taught using lectures. These are supported through tutorials, laboratories and examples classes where appropriate. Details can be found in the individual module specifications.

Lectures are the principal introduction to new material. They are relatively formal in style and are presented to the whole student group or sometimes to more than one group together. Each lecture is of 50 minutes duration with the timetable based on units of one hour to allow for short breaks. Full, prompt attendance is expected.

For tutorials, groups are much smaller and provide opportunities for you to work on problems and exercises connected with the lecture courses. This also provides an additional opportunity for staff to help you with questions arising from the lectures.

Laboratories provide you with the opportunity to practice computational and programming techniques, and to seek practical help from a tutor.

In addition to the taught elements of the programme, which on average require around 12-15 contact hours per week, there will be the need for private study. This time will be spent working on background reading, revision of notes, work on tutorial problems, coursework and individual or group work on projects.

The academic year consists of two eleven week teaching periods and two main examination periods. You are expected to undertake around 30 hours per week of private study spread over a rather longer period than the contact hours, to account for reflective learning weeks, revision and the project work in the summer term. The ratio of private study to contact hours is approximately 4:1. The number of self-directed study hours for each module is specified in the module specification.

All modules are supported by an online learning platform called "Moodle". Moodle contains information specific to the modules you are studying on your programme and additional modules that provide support for your studies in a variety of ways. Moodle is used by different modules in different ways, but you will generally find module material, such as module specifications, lecture notes, supplementary study material, tutorial sheets etc., which you can download or look at online. Each module page also contains a "Grades" application where you can view your coursework marks for the module.

There are also two Moodle modules which are designed to support your studies in a more general way: the "Mathematics Focal Point" which contains information relevant to the administration of the programme and the "SMCSE Placement & Internships Resource Centre", which helps you find placements and internships. Moodle will also be used to send messages to you.

All students have Personal Tutors. These staff members provide small group tutorials throughout Programme Stage 1 on a weekly basis, hold meetings each term with tutees in stages 2-4, and are available to help throughout your time at the University. They provide

support on academic and pastoral matters, as well as serving as a link with other resources within the University.

WHAT TYPES OF ASSESSMENT AND FEEDBACK CAN I EXPECT?

Assessment and Assessment Criteria

Most modules are assessed with examinations and courseworks. Details can be found in the individual module specifications. Assessment is carried out according to context and purpose and recognises that you may exhibit different aptitudes in different forms of assessment:

- Some assessment is by set exercises or coursework which you take home and complete with the aid of your notes; this is particularly the case for Data Science modules that require a computation project with a corresponding written report.
- There are formal unseen written examinations every year.
- Some assessment takes the form of class or online tests
- A small number of modules require students to give presentations

In addition to assessing knowledge and understanding of Mathematics and Data Science, the programme also assesses the ability to use these ideas in the context of an application, the ability to carry out a substantial piece of independent work and the ability to communicate effectively.

Assessment Criteria are descriptions, based on the intended learning outcomes, of the skills, knowledge or attitudes that you need to demonstrate in order to complete an assessment successfully, providing a mechanism by which the quality of an assessment can be measured. Grade-Related Criteria are descriptions of the level of skills, knowledge or attributes that you need to demonstrate in order to achieve a certain grade or mark in an assessment, providing a mechanism by which the quality of an assessment can be measured and placed within the overall set of marks. Assessment Criteria and Grade-Related Criteria will be made available to you to support you in completing assessments. These may be provided in programme handbooks, module specifications, on the virtual learning environment or attached to a specific assessment task.

Feedback on assessment

Feedback will be provided in line with our Assessment and Feedback Policy. In particular, you will normally be provided with feedback within three weeks of the submission deadline or assessment date. This would normally include a provisional grade or mark. For end of module examinations or an equivalent significant task (e.g. an end of module project), feedback will normally be provided within four weeks. The timescale for feedback on final year projects or dissertations may be longer. The full policy can be found at:

http://www.city.ac.uk/data/assets/word_doc/0003/69249/s19.doc

Feedback will typically consist either of individual comments on your work, or of model solutions with general comments on common errors delivered during a lecture or via

Moodle. For examinations, you may be allowed to view your scripts for feedback purposes, in conjunction with your lecturer.

Assessment Regulations

In order to pass your Programme, you should complete successfully or be exempted from the relevant modules and assessments and will therefore acquire the required number of credits. You also need to pass each Programme Stage of your Programme in order to progress to the following Programme Stage.

Your overall aggregate mark will be calculated by combining the aggregate marks from Programme Stages 1, 2 and 3 in the ratio 1:3:6.

Year 0 will not contribute to your overall aggregate mark. There is however a minimum overall average mark of 50% that is required to progress from year 0 to year 1.

The pass mark for each module in stages 1-3 is 40%.

Details can be found in the relevant module specifications.

If you fail an assessment component or a module, the following will apply:

1. Compensation: where you fail up to 30 credits or one sixth of the total credits within a Programme Stage, whichever is greater, you may be allowed compensation if:
 - Compensation is permitted for the module involved (see the What will I Study section of the programme specification), and
 - It can be demonstrated that you have satisfied all the Learning Outcomes of the modules in the Programme Stage, and
 - A minimum overall mark of no more than 10% below the module pass mark has been achieved in the module to be compensated, and
 - An aggregate mark of 40% has been achieved for the Programme Stage, and
 - The total volume of credits compensated over the entire degree does not exceed 45 credits.

Where you are eligible for compensation at the first attempt, this will be applied in the first instance rather than offering a resit opportunity.

If you receive a compensated pass in a module you will be awarded the credit for that module. The original component marks will be retained in the record of marks and your original module mark will be used for the purpose of your Award calculation.

In addition, for the final year of study, condonation of one 15 credit module is possible in lieu of compensation, where the above condition on the minimum overall mark is removed.

Compensation and condonation are only permissible for modules as set out in the Programme Scheme, thus ensuring that all Programme Route Learning Outcomes have been met.

2. Resit: where you are not eligible for compensation at the first attempt, you will normally be offered one resit attempt.

If you are successful in the resit, you will be awarded the full credit for that module. The mark for each assessment component that is subject to a resit will be capped at the pass mark for the module. This capped mark will be used in the calculation of the final module mark together with the original marks for the components that you passed at first attempt.

If you do not meet the pass requirements for a module and do not complete your resit by the date specified, you will not progress to the next Programme Stage and the Assessment Board will require you to be withdrawn from the Programme.

If you fail to meet the requirements for a particular Programme Stage or the Programme, the Assessment Board will consider whether you are eligible for an Exit Award as per the table below.

If you would like to know more about the way in which assessment works at City, please see the full version of the Assessment Regulations at:

<https://www.city.ac.uk/about/governance/policies/city-university-of-london-senate-regulations>

WHAT AWARD CAN I GET?

Bachelor's of Science with Honours:

Part	HE Level	Credits	Weighting (%)
0	3	120	0
1	4	125	10
2	5	125	30
3	6	120	60

Class **% required**

I	70
II upper division	60
II lower division	50
III	40

Ordinary Degree:

WHAT WILL I STUDY?

Programme Stage 0

To pass Programme Stage 0 you must have acquired 120 credits at level HE3 as specified in the programme scheme. To progress from Programme Stage 0 to Programme Stage 1 of the degree, the Foundation Year requirements must have been satisfied. In particular, as stated above, a minimum overall year 0 average of 50% must be achieved.

Module Title	SITS Code	Module Credits	Core/ Elective	Can be compensated?	Level
Foundation Mathematics	MA0001	20	C	N	3
Discrete Mathematics	MA0002	20	C	N	3
Mathematics with Applications to Economics	MA0003	20	C	N	3
Introduction to Programming with Python	MA0006	20	C	N	3
Introduction to Probability and Statistics	MA0004	20	C	N	3
Employability and Transferable Skills	IN0008	20	C	N	3

Programme Stage 1

Programme Stage 1 consists of modules that make up 125 credits. All modules are core.

Module Title	SITS Code	Module Credits	Core/ Elective	Can be compensated?	Level
Functions, Vectors and Calculus	MA1618	30	C	N	4
Algebra	MA1605	15	C	N	4
Linear Algebra	MA1622	15	C	N	4
Introduction to Probability and	MA1608	15	C	N	4

Statistics					
Logic and Set Theory	MA1610	15	C	N	4
Number Theory and Cryptography	MA1613	15	C	N	4
Introduction to Modelling	MA1621	15	C	N	4
Skills, Careers and Employability Analysis for Mathematics students	MA1660	5	C	N	4

Programme Stage 2

Programme Stage 2 consists of modules that make up 125 credits.

There are seven core modules and 15 credits of elective modules

Module Title	SITS Code	Module Credits	Core/ Elective	Can be compensated?	Level
Programming and Data Science for the Professions	MA2619	15	C	N	5
Real and Complex Analysis	MA2616	30	C	N	5
Vector Calculus	MA2615	15	C	N	5
Sequences and Series	MA2617	15	C	N	5
Decision Analysis	AS2021	15	E	Y	5
Applied Mathematics	MA2607	15	C	N	5
Numerical Mathematics	MA2608	15	C	N	5
Professional Development and Employability	MA2700	5	C	N	5
Applications of Probability and Statistics	MA2611	15	E	Y	5

Programme Stage 3

Programme Stage 3 consists of modules that make up 120 credits. There are five core modules, a core Group Project and 30 credits of elective modules. The module MA2611 is a prerequisite for AS2204 and MA3664.

You may transfer between the MSci in Mathematics with Data Science, the MSci in Mathematics, the BSc in Mathematics with Data Science and the BSc in Mathematics at any time up until the start of year 3. Transfers are not automatic, but subject to the approval of the Programme Director, who will take academic performance into consideration.

Module Title	SITS Code	Module Credits	Core/ Elective	Can be compensated?	Level
Codes	MA3100	15	C	N	6
Techniques for Data Science	MA3200	15	C	N	6
Group Project	MA3697	15	C	N	6

Principles of Data Science	IN3100	15	C	N	6
Introduction to Artificial Intelligence	IN3200	15	C	N	6
Machine Learning	IN3300	15	C	N	6
Differential Equations	MA3660	30	E	Y	6
Advanced Complex Analysis	MA3661	15	E	Y	6
Stochastic Models	AS2204	15	E	Y	5
Operational Research	AS3021	15	E	Y	6
Probability and Statistics 2	MA3664	30	E	Y	6
Graph Theory	MA3300	15	E	Y	6
Game Theory	MA3662	15	E	Y	6
Dynamical Systems	MA3608	15	E	Y	6
Introduction to the Mathematics of Fluids	MA3609	15	E	Y	6
Introduction to Mathematical Physics	MA3663	15	E	Y	6
Mathematical Processes for Finance	MA3614	15	E	Y	6
Groups and Symmetry	MA3615	15	E	Y	6
Mathematical Biology	MA3616	15	E	Y	6

TO WHAT KIND OF CAREER MIGHT I GO ON?

Mathematics programmes prepare you for future employment by providing you with key skills highly valued by employers. Our graduates are very successful at finding employment in a wide range of areas.

Many of our graduates secure jobs in the financial sector. Some of the typical financial institutions recent graduates have gone on to work for include Lloyds TSB, KPMG, Citigroup, Santander, TBS, Commerzbank, and NatWest. Typical jobs within the financial sector have included Financial Consultant, Investment Banker, and Customer Service Officer.

Former students have also gone on to do finance-related work such as accounting or banking management for other types of institutions. Recent examples include the British Museum, The National Children's Bureau, the UK Border Agency and a large number of retailers such as Orange, JD Sports or Sainsbury's.

Students also often go on to work in Data Science companies, or Data Science teams in a wide range of other companies (e.g. in retail) and consultancies.

A number of graduates go on to do further study in the form of a PhD in a Mathematics related area or to receive specialist training for particular professions. Examples of specialist training are the PGCE (Postgraduate Certificate in Education), Chartered Financial Analyst and Chartered Accountant.

The Centre for Career & Skills Development provides a service to current full-time and part-time undergraduates and postgraduates and to recent graduates of the University. Their aim is to give you the advice, information and skills you need to make a smooth transition into the world of work.

If you would like more information on the Careers support available at City, please go to:
<https://www.city.ac.uk/careers/your-career>

WHAT PLACEMENT OPPORTUNITIES ARE AVAILABLE?

You may go on an approved placement between the second and third years, taking module MA2698 Professional Placement. Your experience will be graded on the basis of reports from two visits made by the Visiting Tutor and your final report. However, although the grade obtained is reported on the degree transcript it does not contribute to the final degree result.

Placement guidelines are issued to students and employers at the commencement of training, and these include a placement health and safety booklet. Early in the placement year you will be required, in conjunction with your Workplace Supervisor and the Visiting Tutor (a member of academic staff), to produce a placement plan. Training is monitored through two formal visits by the Visiting Tutor, and written reports. Informal contact is maintained throughout the year as necessary.

If you wish to take a professional placement then you are advised to register accordingly at the beginning of Programme Stage_2. The School of Mathematics, Computer Science and Engineering Professional Liaison Unit Work Based Learning Advisor collaborates with the University Career and Skills Development Service to deliver a series of Professional Development workshops to prepare you for searching for and applying for a work placement. The Professional Liaison Unit is in regular contact with companies and other organisations concerning the availability of training placements and will advise students on making applications.

Independently from the Placements scheme described above, the Work Based Learning Advisor and the Careers Centre also provide support if you wish to take a summer internship during any of your years at University. Furthermore, City University through the Careers Centre supports several volunteering schemes which allow you to develop valuable work and inter-personal skills.

You are welcome to make your own applications at any time but are strongly advised to discuss these with the Work Based Learning Advisor. Support for seeking placements is provided in the SMCSE Placement & Internships Resource Centre module on Moodle.

WILL I GET ANY PROFESSIONAL RECOGNITION?

This programme will meet the educational requirements of the Chartered Mathematician designation, awarded by the Institute of Mathematics and its Applications, when they are/it is followed by subsequent training and experience in employment to obtain equivalent competences to those specified by the Quality Assurance Agency (QAA) for taught masters degrees.

<https://ima.org.uk/university-degree-programme-accreditation/>

HOW DO I ENTER THE PROGRAMME?

The Foundation Year is designed as an entry route for students who were unable to obtain the required A Level grades to access the corresponding BSc programme directly.

Our standard offer for Mathematics with Data Science Foundation is CCC with a C in A-level Mathematics.

The minimum GCSE English Language is 4 and the minimum GCSE Mathematics is 5.

Suitable equivalent overseas qualifications are also considered. However, in all cases the final decision is subject to the satisfactory evaluation of prior qualifications by the Admissions Tutor.

English language requirements: IELTS: 6.0 with a minimum of 6.0 in the writing sub-test
GCSE: English language grade C. Please note that TOEFL is not accepted as evidence of English language ability for students that require a Confirmation of Acceptance for Studies.

Each application is treated on its own merit. This is to allow us to weight in work experience, personal statements, and other factors, as and when appropriate.

Second year entry:

Direct entry into the second year is also possible. This is normally for students who have successfully completed the first year of a similar undergraduate course. In all cases you will be individually assessed by the Admissions Tutor who will determine your suitability for the course.

Version: 3.0

Version date: May 2023

For use from: 2023/24

Information is provided subject to Terms and Conditions for study at City, University of London.
